

## Description

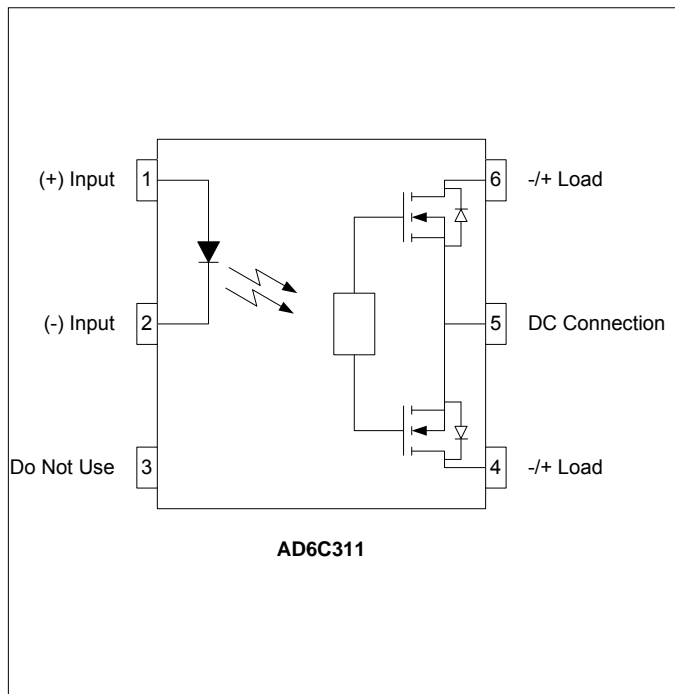

The AD6C311 is a bi-directional, single-pole, single-throw, normally open multipurpose solid state relay. It is designed to replace electromechanical relays in general purpose switching applications. The relay consists of an integrated circuit that drives two rugged source-to-source enhancement type DMOS transistors – optically coupled to a light emitting diode.

The AD6C311 comes standard in a miniature 6 pin DIP package making it ideal for high-density board applications.
